EOL Overview

Subject	Automated Smart Updater (ASU)
EOL Original Issue Date	21 February 2018
Replacement Product	Device Director

Description

Geist is initiating an End-of-Life for the Automated Smart Updater (ASU) utility that enabled simultaneous firmware updates of multiple Geist networked devices. This utility has been replaced by the Device Director utility.

Device Director is a comprehensive, Windows-based utility that may be used to install, configure and maintain multiple Geist devices on a given network. The suite of useful tools helps users quickly set the IP addresses of multiple devices, modify network configurations, upload firmware, import/export configuration files and validate device connectivity. Device Director gives installers a powerful and easy way to mass configure devices and it effectively reduces setup and maintenance costs.

If you have any questions, concerns, or are interested in learning how the Device Director can meet your needs, please contact your Account Manager, our Sales Desk, or visit our website at www.geistglobal.com.

Sincerely,
Geist
Product Management Team
